## **PERTEMUAN 4**

## MEMBUAT TEMPLATE WEB SEDERHANA DENGAN CODEIGNITER

Pada pertemuan ini kita akan membuat template web sederhana dengan codeigniter,nah bagaimana sih cara membuatnya?,okeh kita mulai saja

1. Langkah Pertama buatlah controller untuk menampikan view dengan nama Web.php kemudian simpan di application/controllers/Web.php

```
cype
cype
define("BSEPATH") on exit ('no direct script access allowed');
define access access allowed');
define access access allowed');
define access access access access allowe
```

- 2. Kemudian keview lalu buat file v\_header.php,v\_index.php,v\_footer.php,v\_about.php lalu simpan dalam folder application/views
- 3. Kita akan ketikan script pada header terlebih dahulu

Header disini fungsinya untuk menampikan identitas utama dari sebuah situs.

Seperti yang dapat kalian lihat gambar dibawah ketikan script dan settinglah sesuai kebutuhan

```
File Edit Selection Find View Goto Tools Project Preferences Help
     mimes.pf
     routes.ph
     user_age
   ▼ 📄 controllers
     ○ contoh1.
     latihan1.ş
     ☐ Welcome
                   ▶ 🛅 core
   ▶ helpers
   ▶ m hooks
   language
                   ▶ Ilibraries
   logs logs
   ▶ models
   third_party
   ▼ 📄 views
    ► errors
     index.htm
     v_header
     P welcome
    htaccess
    index.html
  v 🗃 assets
   V CSS
  ▼ 📄 system
   ▶ 🔳 core
   ▶ ■ databas
```

4. Lalu ketikan lagi script pada v\_index yang mana index ini berisi konten dari web yang akan dibuat

```
| Company | Comp
```

5. Langkah selanjutnya kita buat untuk script untuk footernya pada bagian v\_footer

5. Lalu buat tampilan v\_about.php untuk halaman About dengan mengetikan

7. Selanjutnya kita akan bikin css untuk tampilan webnya agar tertata rapi dan membuatnya lebih menarik

untuk direktorinya sendiri kita bikin folder baru lagi yaitu folder assets dan css,

```
Company operate booking connection could be proceeded as the control operated by the control operated
```

8. Nah setelah itu kita akan setting base url nya sesuai dengan direktori projetnya contoh \$config['base\_url'] = 'http://localhost/pustaka-booking-Gunawan/';

```
_ 0 X
Config.ph
                         URL to your CodeIgniter root. Typically this will be your base URL, WITH a trailing slash:
   constant:
database
doctypes
foreign_c
hooks.ph
 $config['base_url'] = 'http://localhost/pustaka-booking-Gunawan/';
 ☐ Web.php
☐ Welcome

b a core
 ► m helpers
 ▶ ■ libraries
logs models
 third_party
   oriors
index.htn
v_abouts
v_footer.q
v_header
v_index.p
view-latif
welcome
                                                                                                                                                                           n doctypes
      foreign_c
                              codeigniter</tit
      19 hooks.ph
      index.htn
      memcach
      migration migration
```

Jangan lupa juga pastikan link rel pada bagian v\_header untuk akses css nya sudah benar direktorinya

9. Kemudian cek lagi bagian web.php

Cek sudah ditambahkan script ini atau belum \$this->load->helper('url');

 Kemudian pada bagian autoload yang terdapat di direktori application/config/autoload didalam kurung array tambahkan('url')
 Seperti ini \$autoload['helper'] = array('url');

```

| File (af Stelect Red Vew Cot Popular Professor Help
| File (af Stelect Red Vew Cot Popular Professor Help
| File (af Stelect Red Vew Cot Popular Professor
```

11. Sebelum kita meruning kontroller Web.php seperti biasa kita setting config dan routesnya terlebih dahulu di bagian application/config

#gambar dibawah setting config

Base url nya menyesuaikan dengan direktori project yang sudah dibuat

```
☐ mimes.pt
☐ profiler.p
☐ routes.pt
☐ smileys.p
☐ user_age

▼ ☐ controllers
☐ control
```

#gambar dibawah ini settingan routesnya

Untuk default controlernya diganti dengan Web

```
| Constant | Constant
```

12. Setelah itu kita run dengan mengetikan perintah di url web http://localhost/pustaka-booking-Gunawan/ dan jangan lupa nyalakan aplikasi xampp nya terlebih dahulu sebelum mengakses localhostnya

## \*Tampilan halaman depan /menu utama

## \*Tampilan halaman About
